

# UN CC:Learn at a glance

Investing in People and Learning to Foster  
a Green and Climate Resilient Transition

**UN CC:Learn**

The One UN Climate Change Learning Partnership

*UN CC:Learn is a partnership of more than 30 multilateral organizations supporting countries to design and implement systematic and results-oriented climate change learning. With our partners across the UN system and in our partner countries, we promote capacities to ensure continuous and strategic approaches to the provision of knowledge and skills.*

## **Global Level**

At the global level, the partnership supports knowledge-sharing and the dissemination of common climate change learning materials. It also coordinates training interventions through collaboration of UN agencies and other partners, contributing to a growing critical mass of professionals and individuals with the necessary understanding of the basics of climate change to inform their decisions and take effective action.

The Secretariat for UN CC:Learn is hosted by the United Nations Institute for Training and Research (UNITAR). Funding for UN CC:Learn is provided by the Swiss Government and UN partners.

## **National Level**

At the national level, UN CC:Learn supports countries in addressing learning priorities relevant to their National Determined Contributions (NDCs) and National Adaptation Plans (NAPs), through the development and implementation of climate change learning strategies, in collaboration with national education and training institutions. UN CC:Learn currently engages with 30 countries, either bilaterally or through regional programmes.

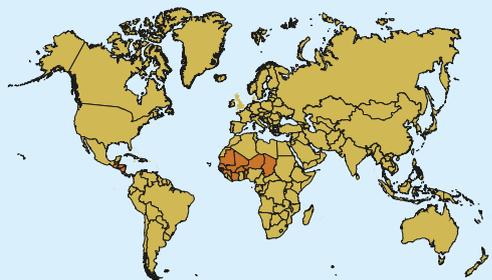

# Key Results

## Global and National Levels

Global knowledge-sharing market place for climate change learning providing all the latest and best offers from the UN system

Regional climate change learning strategy launched in Central America, including eight countries, and regional hub in West Africa supporting 13 countries

# USD + 10 million

leveraged from national or international sources for further implementation of the national climate change learning strategies.

# +400,000

Registered participants from 195 countries using our free e-learning platform offering learning materials on many different climate change topics

# 12
